

Simple deployment guide of Private DNS integration with On-premises

Architecture

- **OCI will create the DNS entries for Compute resources based on the private domain in the VCN**
- **Private DNS resolver for DNS resolution to and from other private networks**
- **You need to configure each VCN to resolve On-Premises resolution**
- **Each VCN in a different DNS domain**
- **Create a Listening Endpoint to Listen your On-premises DNS requests and resolve OCI DNS names**
- **Create a Forwarding Endpoint to Forward request to On-Premises DNS requests**
- **Create a Rule to Forward all On-premises for the On-Premises domain(s)**
