

Protect your Internet facing Application
using modernized architecture

With this solution, you will be able to achieve N-S traffic inspection for your Internet published App via OCI Network Firewall, protect your application using OCI WAFv2, load balance the traffic using LBaaS while keeping your network ready for future environments via Hub & Spoke architecture.

Main OCI Services used:

- Hub & Spoke architecture
- Web Application Firewall (WAF)
- LBaaS
- Network Firewall
- IPSec VPN to securely manage the Environment
- DBCS
- Compute VM

Modernized Architecture

Destination	Target Type	Target	Route type
LB CIDR	Private IP	FW	Static

Destination	Target Type	Target	Route type
0.0.0.0/0	IGW	IGW	Static
